

RNG Production for your

# DAIRY

development

## Decades of helping dairies turn waste into profit

Northern Biogas was founded by dairymen like you. And decades after building the first dairy manure digester in Wisconsin, we are still helping American dairy farmers turn their manure from an expense into a sustainable source of revenue.

So when you're ready to stop talking about RNG and actually build an RNG project, contact us. We know how to maximize the profitability of your manure quickly, reliably, and without disrupting your operations. Because at the end of the day no other developer knows a dairy farm like we do.

Well funded, supported by solid management and backed by decades of experience in digesters and gas processing, we have been continually improving our facility designs to maximize biogas production and minimize operating costs. And now we are offering that experience to you.

Contact us today to learn how you can see RNG profit in months, not years with our no-nonsense open book partnership approach.

We've got the experience and the funding you need to monetize your manure quickly. Ask your fellow dairymen why they chose to partner with Northern Biogas.

- See profit in months, not years
- No-nonsense open book partnership
- Fully funded by H.I.G. Capital
- Experts in Digesters & Gas Processing
- No impact on dairy operations
  
- Design & Construction
- Operations & Maintenance
- Field Services
